

# S.E.P.M.A.R. Safety Storage Cabinets

## S.E.P.M.A.R. has revolutionised safety storage cabinets.

The S.E.P.M.A.R. closing system has only one moving part independent to the doors which are **free to move 180 degrees** to the outside panels without restriction to the sequential closing system, also allowing the shelves to easily slide out.

100-litre safety storage cabinet

This simple, single action closing system has **fewer parts – hence fewer faults.** Also included are four corner underside levelling bolts, anti-static wire and three-point door latch and handle lock.

## All S.E.P.M.A.R. safety storage cabinets:

- Are **built to Australian Standards (1940)**, specifications on the inside of the door
- Are **an Australian design** – a world first patented invention made for improved safety and ease of opening
- Have **no sparking risk** as all contact points are made from alloy
- Have dual door sequential closing mechanisms with **only one moving part**
- Have **two 50mm diameter venting bungs on both sides** of the cabinet, located top and bottom

To find out more about S.E.P.M.A.R. safety storage cabinets, visit [www.sepmar-firex.com.au](http://www.sepmar-firex.com.au) or call Darren McKercher on 041 436 44 33.
