

S.E.P.M.A.R. SEGREGATION UNITS

FOR TRANSPORT OF DANGEROUS AND HAZARDOUS FREIGHT

S.E.P.M.A.R. has improved and revolutionised the segregation device, keeping the strength in structure but using lightweight materials with no complicated door-locking levers.

PROVEN

The S.E.P.M.A.R. cabinet has been tested and approved by the Australian Competent Authorities (approval no. 30594).

SIMPLICITY

This simple design has drop-pin door locks that fit into the side wall framework, preventing any dislodgement. The door lock is simple – no moving parts, no faults.

STRENGTH

The door hinges are a heavy-duty pin hinge, enabling the doors to be easily removed in case of damage to the door. The hinges are positioned behind the wall frame, which offers additional protection to prevent damage to the hinges.

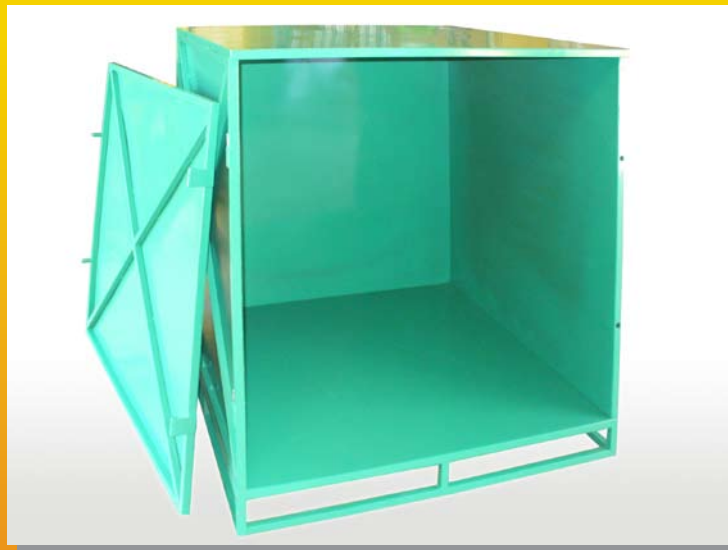

Structurally sound with no complicated door-locking devices.

The S.E.P.M.A.R. segregation unit can be delivered to you either flat packed or fully assembled.

This versatile ability also enables easy replacement of any damaged component during usage; one panel can be replaced without discarding the whole segregation unit.

In addition to these benefits and simplicity we have also reduced the cost.

Versatility and strength.

Ease of operation, no complications.
